## BRAZING PRODUCTS

**Brazing** is a metal joining process. The brazing rod is heated above its melting point and is flowed over the base metal which has been preheated to the correct temperature and is then cooled to join the workpieces together. It is similar to soldering, except the melting temperature for brazing rod is higher and the rod must be melted with the torch for brazing.  
**IN THE PICTURE TO THE LEFT, YOU CAN SEE OUR \$15 DIGITAL THERMOMETER WITH A THERMOCOUPLE WIRE CLIPPED TO THE WORK PIECE THAT IS HELD BY OUR \$5 BRAZING JIG. THIS MAKES FOR FOOL-PROOF AND HANDS-FREE BRAZING.**
